

# Fact Sheet

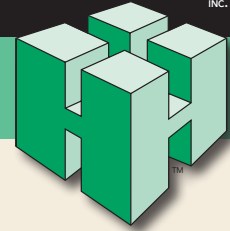

Double "H" Plastics has always been a leader and innovator in specialized industries, including perfecting the VersaForm® composite lid technology and achieving superior results in injection-molded plastics and in-mold labeling. Our strength is in our plastic packaging technology that combines a specialized molding process that molds paperboard inserts and a variety of plastic resins to produce unique and vivid custom packaging. That process allows for a product with superior graphics, tight tolerances and great consumer appeal.

Our in-house design capabilities allow for packaging solutions in either standard shapes or custom sizes. Either way, the results are functionally sound, attractive, competitive, and meet the marketing needs of customers in Ice Cream & Dairy, Pet Care, Snacks and other Consumer Products.

**"Our strength is developing new packages to meet specific customer needs."**

**Double "H" Plastics**

# Fact Sheet

Double "H" Plastics has three plants in the United States that can handle the smallest or largest of volumes while exceeding the highest quality standards. Packaging capabilities include:

- injection molding
- cup forming
- in-mold labeling
- packaging design
- mold design and manufacture

Double "H" Plastics can design, prototype and manufacture packaging components to your specifications. These in-house capabilities speed up product development and shorten the time it takes your product to get to the marketplace.

From producing your existing package better and faster, to providing you with a unique, eye-catching and consumer-friendly package that stands out in that most expensive of real estate – the store shelves – Double "H" Plastics is the preferred designer and manufacturer for your packaging needs.
